Forging of Long shafts with Splines on either sides.

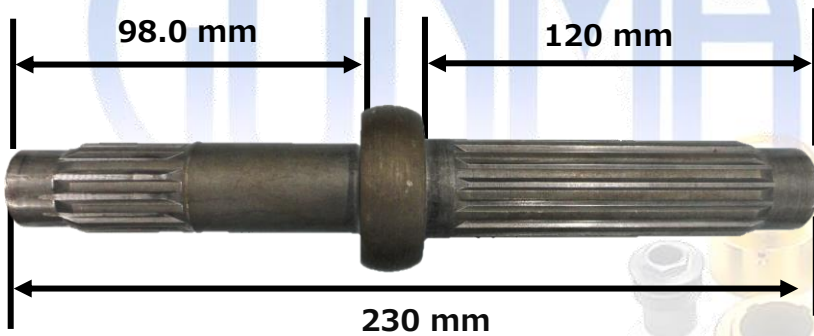

KOMATSU 400t (L1C400L)

In 2020, we have newly implemented a mechanical press that is capable of long strokes.

With the implementation of the new mechanical press "long stroke", we are capable of forging parts that were not possible before.

PRECISION INDUSTRY

Customers who are considering integrated molding products.  
 ※ Involute Tooth Profile SPEC (tooth width, tooth thickness, pressure angle, etc.)

Please do not hesitate to contact us for RFQ or any inquiries.

### Selling Point

(Manufacturable accuracy / material, etc.) Shaped length under the brim

Existing facilities 150mm

Newly installed facilities 300mm

"Compared to the conventional equipment, the length under the flange is 300 mm. It is now possible to mold about **twice** as long as before."
